

# Anypoint Studio: Installation Guide

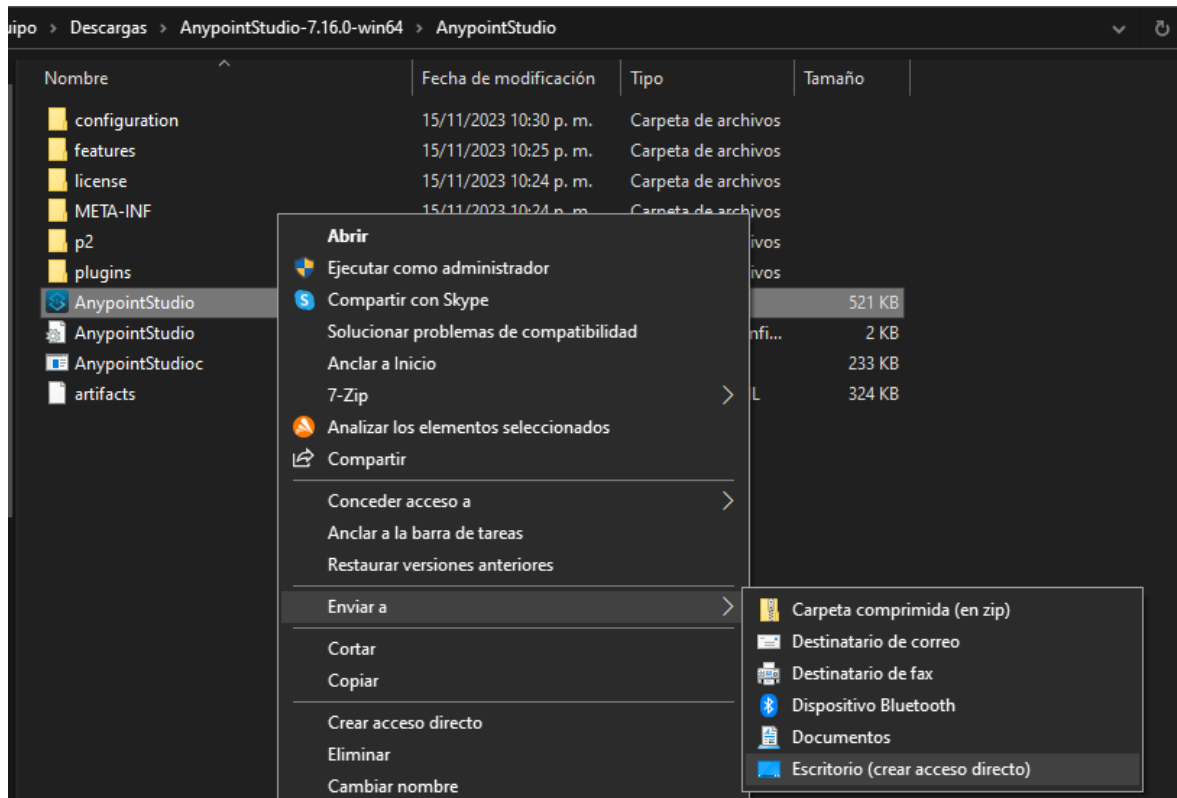

## Prerequisites before installing Anypoint::

POSTMAN

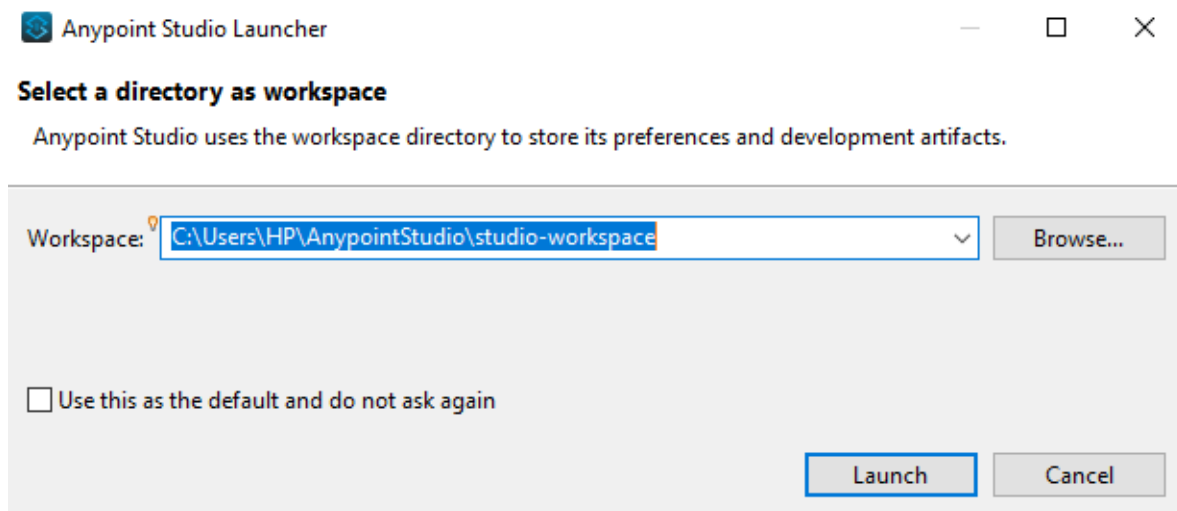

JDK Java 1.8

1. Download Anypoint Studio from: <https://www.mulesoft.com/lp/dl/anypoint-mule-studio>

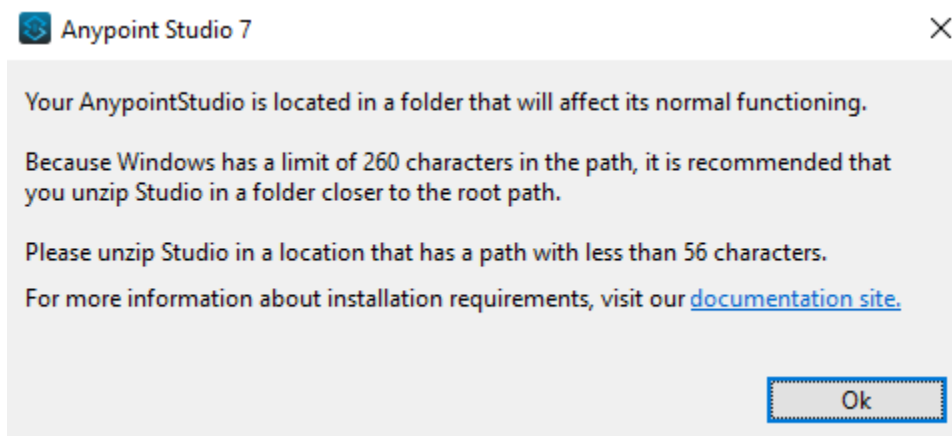

2. Unzip the downloaded file and move it to the desktop.

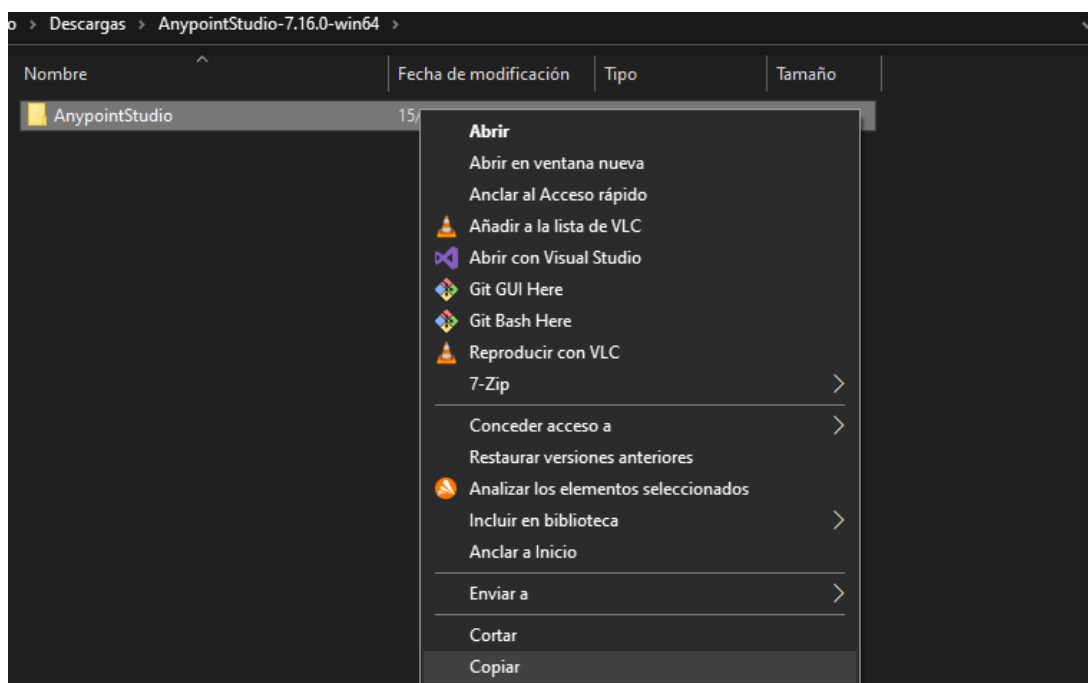

3. Open the shortcut and configure the workspace as shown in the image below:

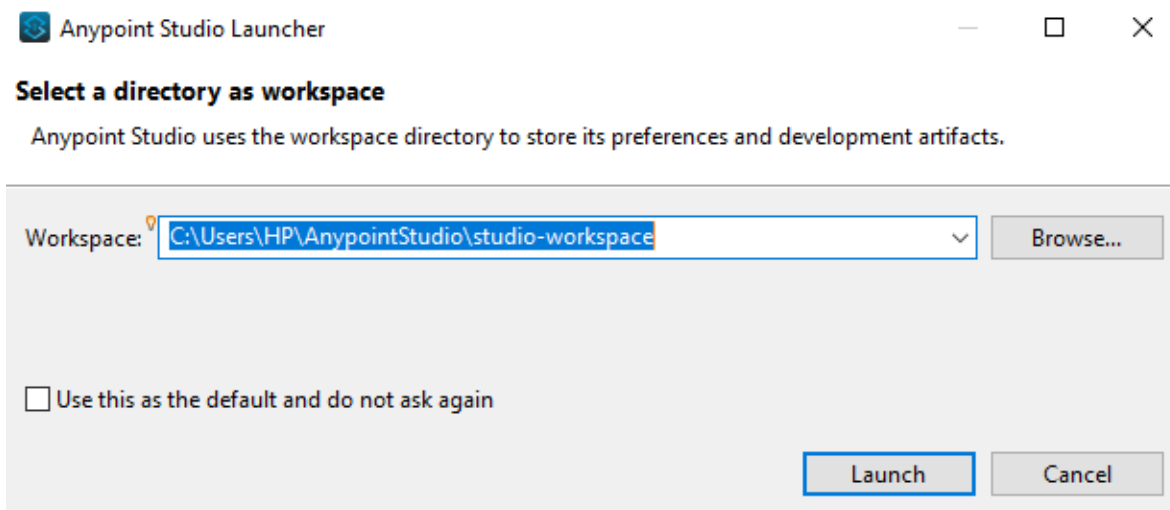

If you encounter the following error message during the Anypoint Studio installation:

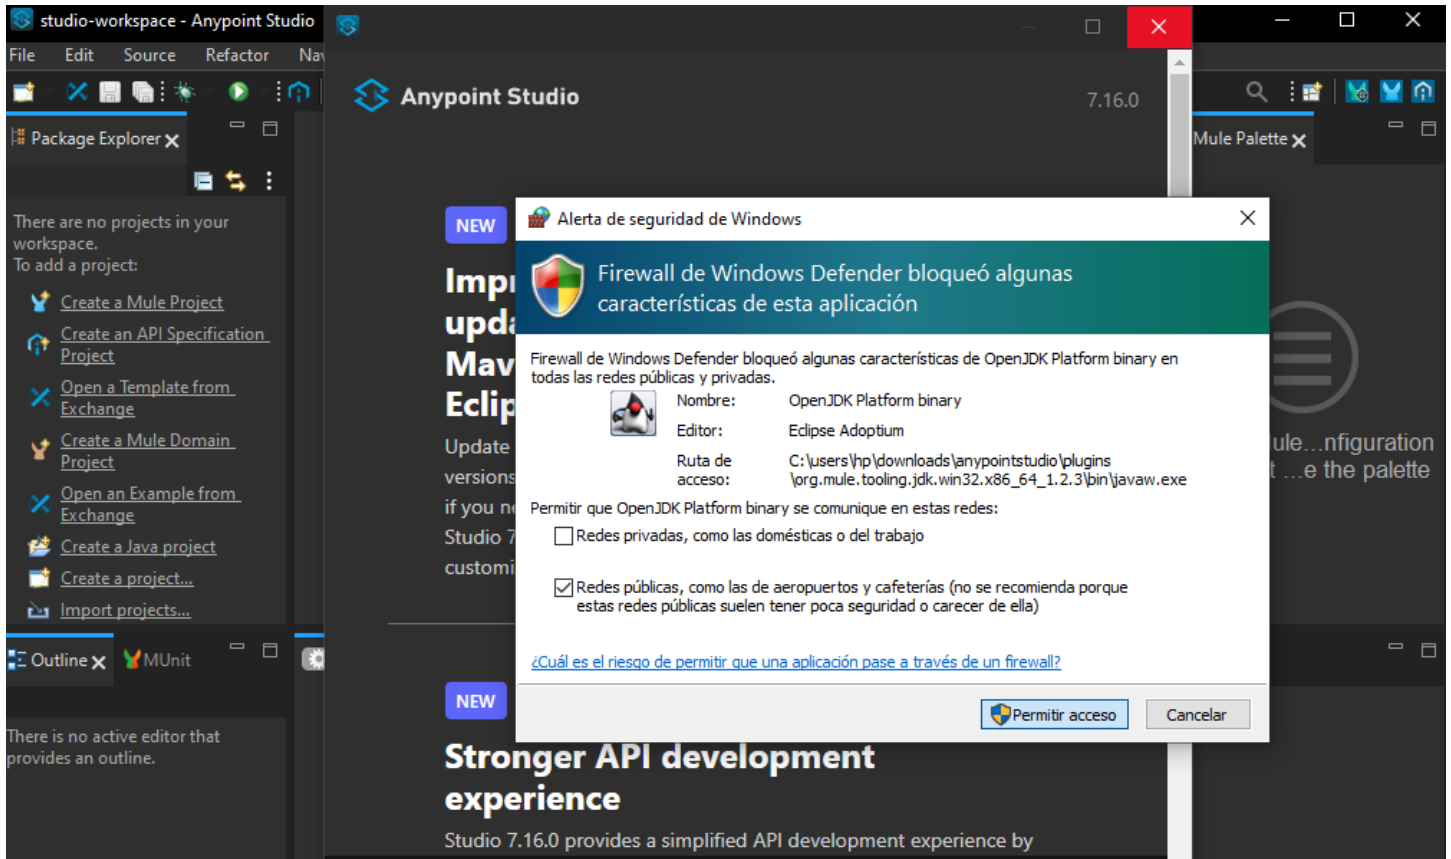

Follow these steps to resolve the issue, Copy the "AnypointStudio" folder, Move the copied folder to the root directory of the Downloads folder.:

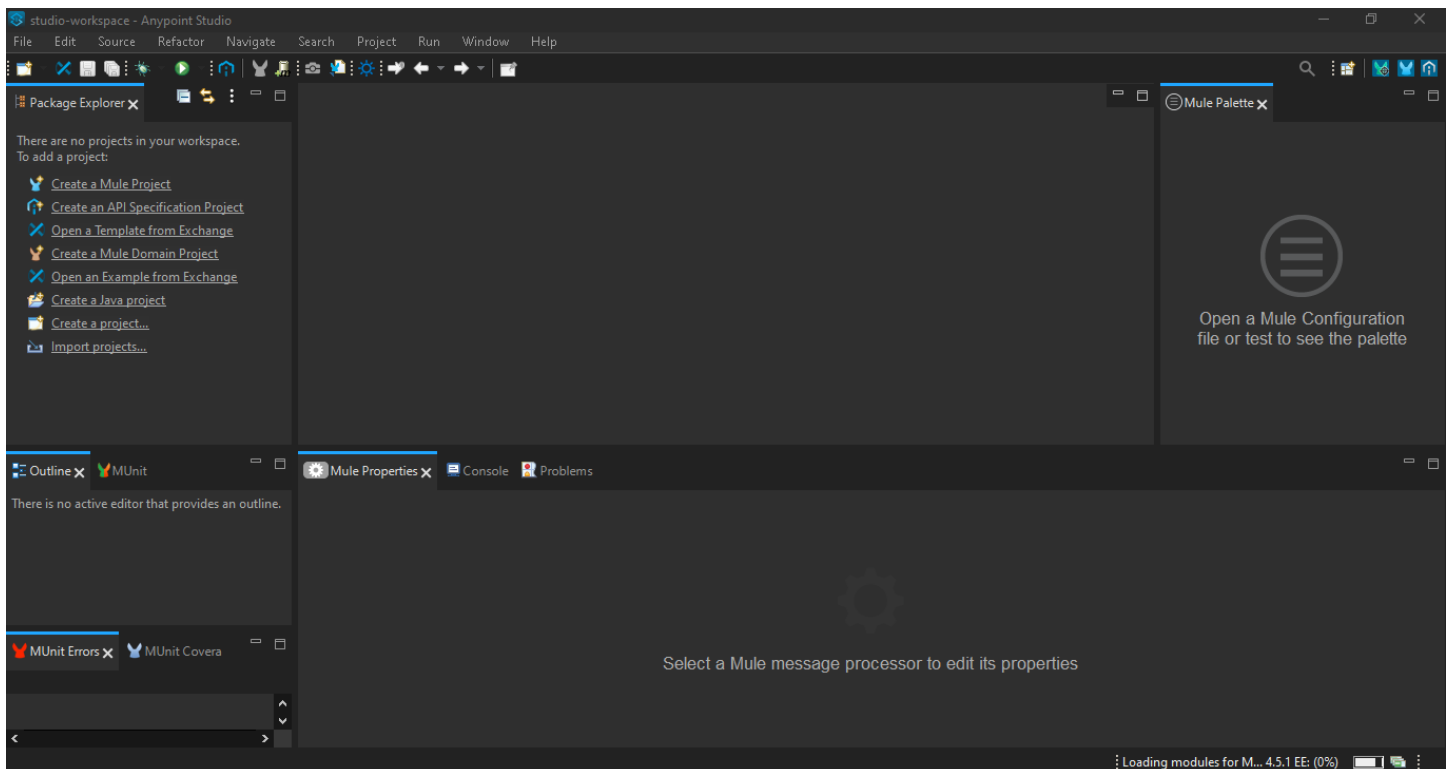

Configure the workspace again:

4. Close the startup window to verify that the installation was successful:

Anypoint Studio Start Screen:

# Anypoint Studio: Guía de instalación

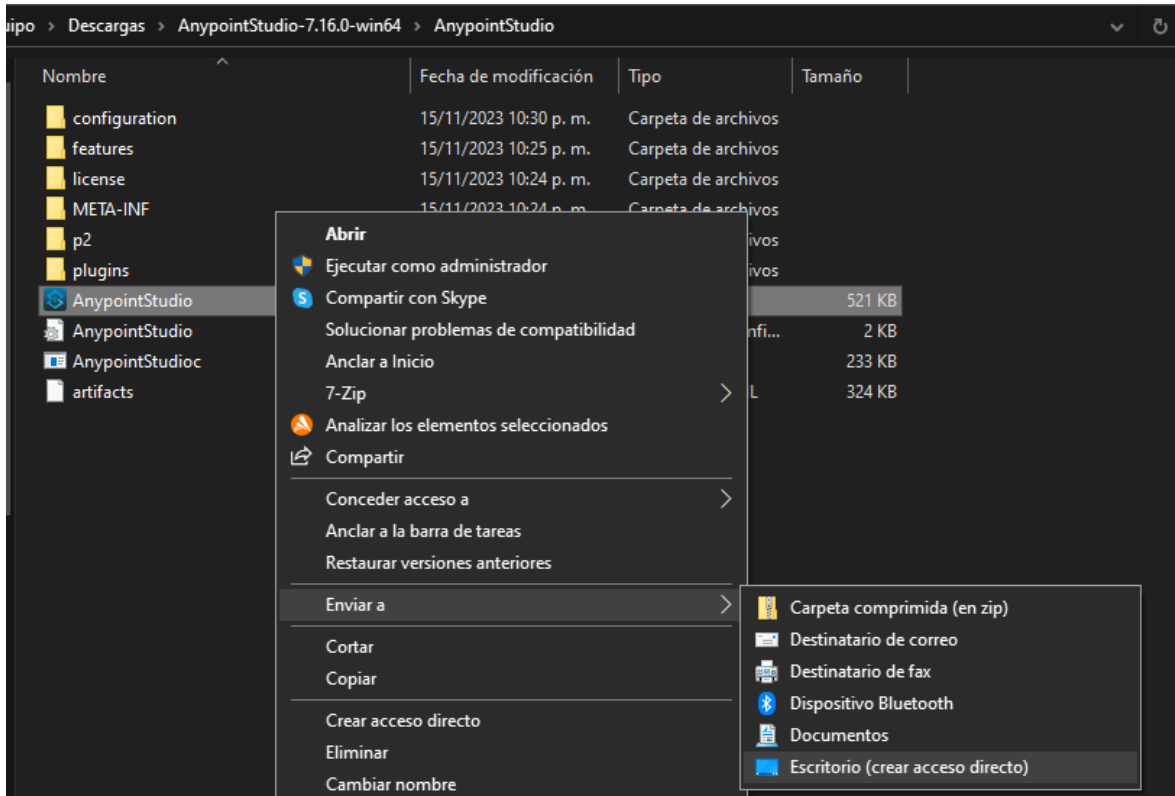

## Herramientas necesarias antes de instalar Anypoint:

POSTMAN

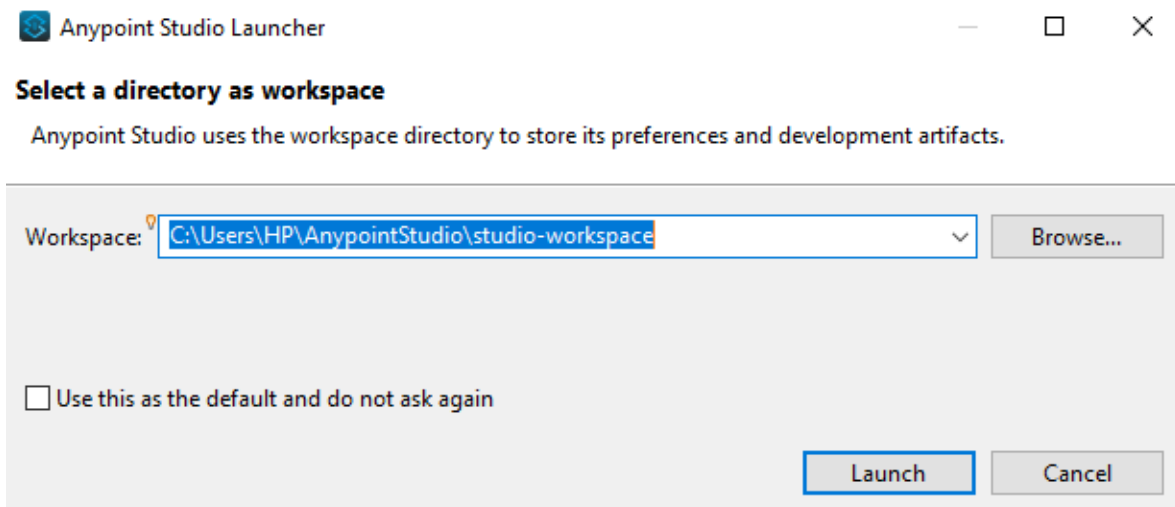

JDK Java 1.8

1. Link de descarga de Anypoint: <https://www.mulesoft.com/lp/dl/anypoint-mule-studio>

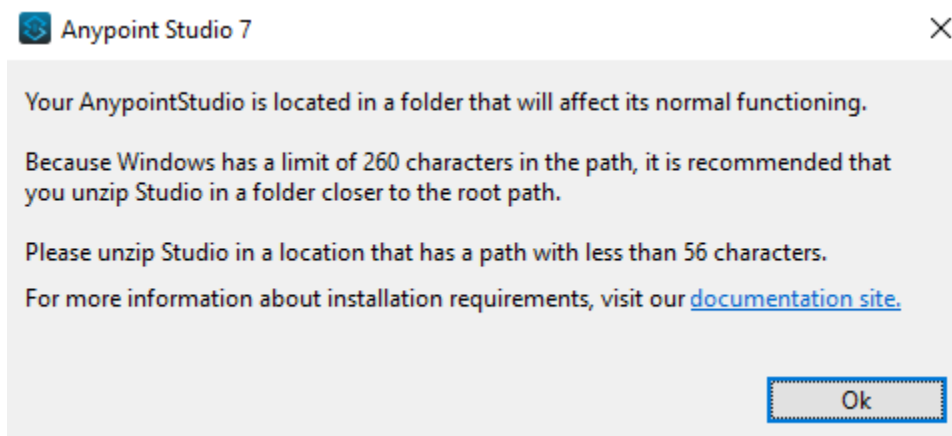

2. Descomprimir el archivo y enviarlo al escritorio.

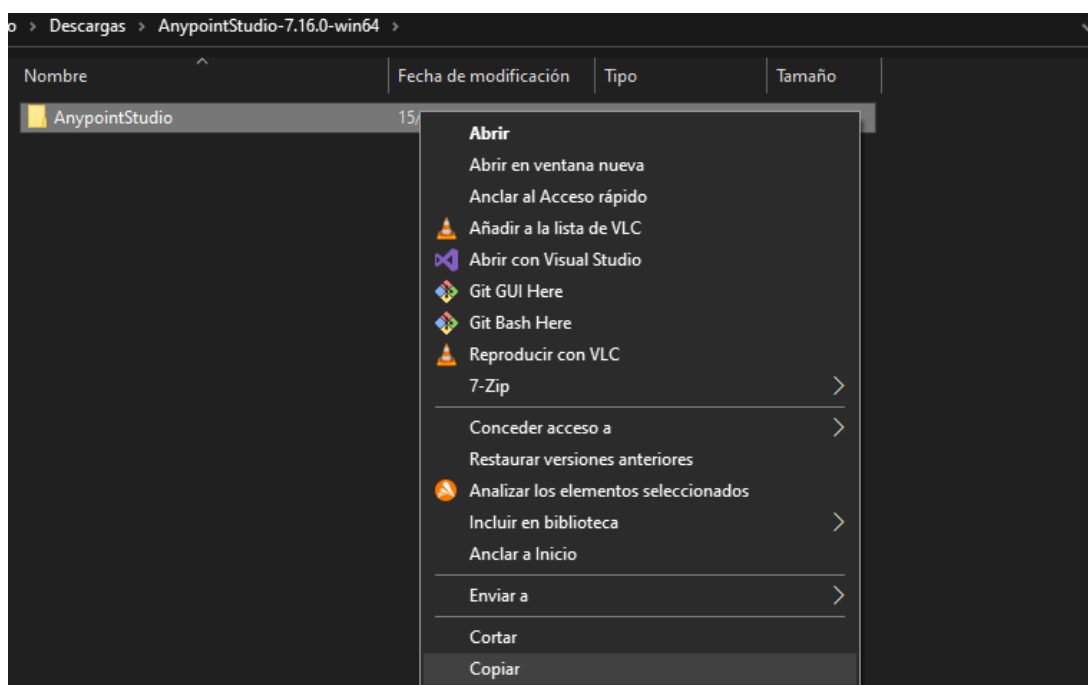

3. Abrir el acceso directo y configurar el espacio de trabajo, como se aprecia en la imagen a continuación:

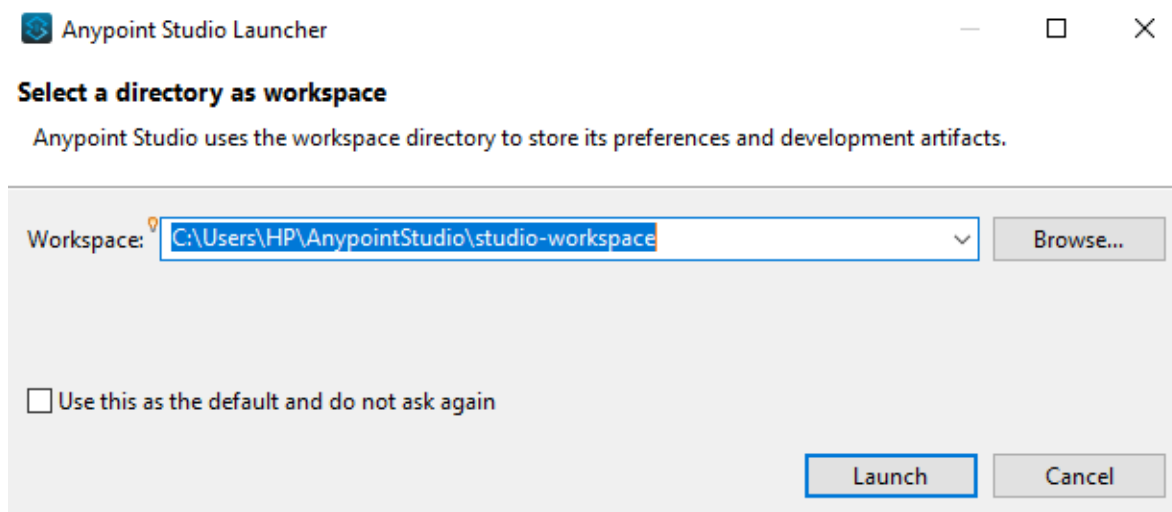

Solución de error al instalar Anypoint Studio, el cual lanza el siguiente mensaje:

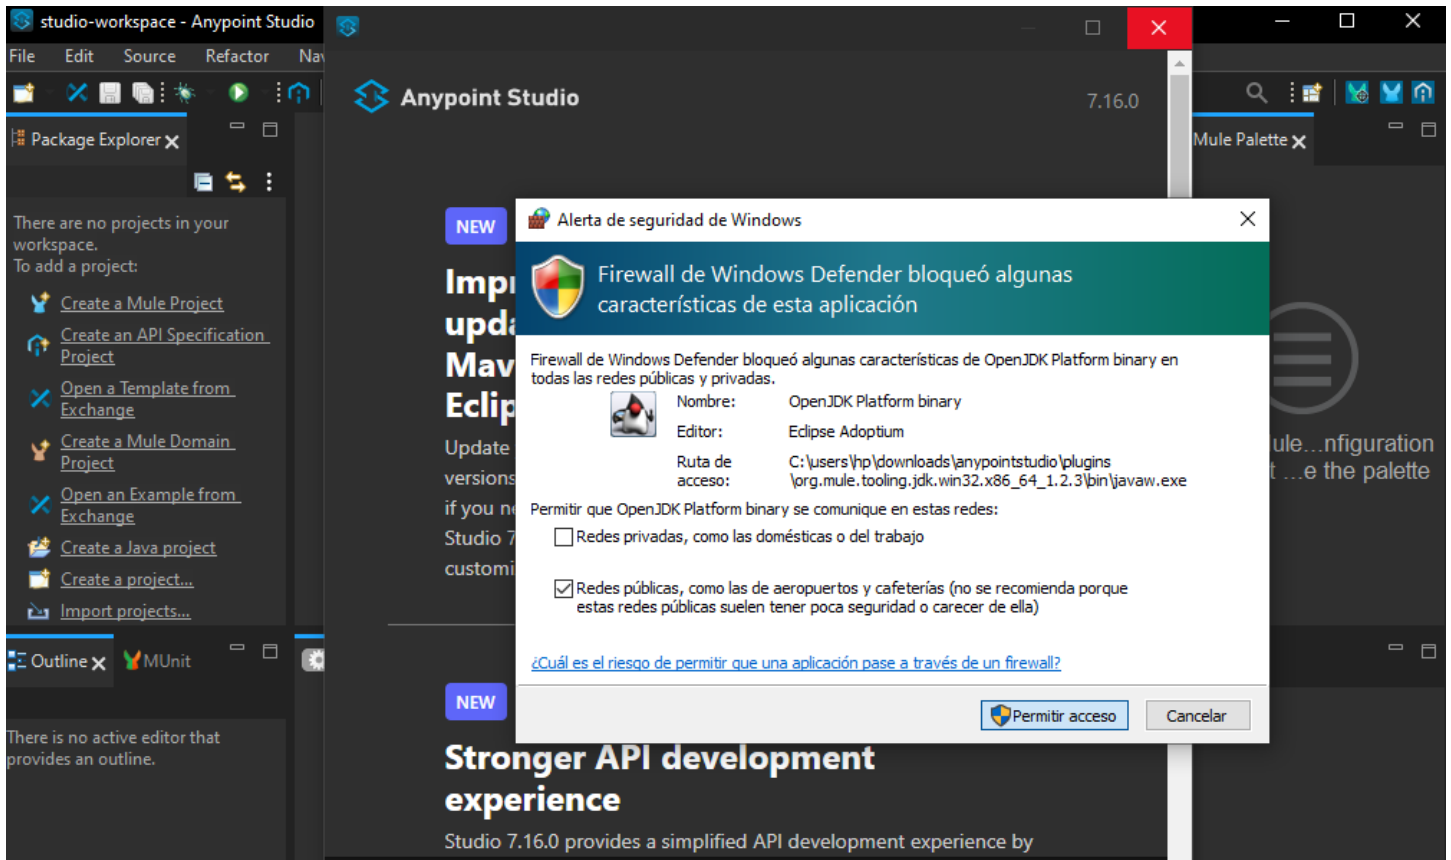

La solución es la siguiente, copiar la carpeta (AnypointStudio) y moverla a la raíz de la carpeta de Descargas:

Nuevamente configurar el espacio de trabajo:

4. Cerrar la ventana de Inicio y que verifica que se ha instalado correctamente:

Interfaz de Inicio en Anypoint
